

FLEXPAK SEMI-AUTO PREROLL MACHINE

The FlexPak MAX is where practicality and dependability seamlessly meet efficiency. The MAX was designed by seasoned pre-roll pros to meet the high demands of heavy pre-roll production - it's just Built Different.

Despite its smaller size (20 3/4"L x 15"W x 12.5"H), the MAX has the power to produce over 1100 packed and fully closed pre-rolls per hour. This highly efficient output makes it ideal for businesses that need medium to large scale pre-roll production.

The quickly interchangeable cone plates come in a variety of cone sizes so businesses can easily customize their pre-rolls to quickly meet the demands of the market.

With the ease of operation businesses will only need a pre-roll production staff of 1-2 team members helping reduce production costs and maximizing profits.

The FLEXPAK MAX produces more cones for the price than any other machine on the market. This, combined with its low maintenance and seamless operations, means more cones in less time.

513 PRE-ROLLS PER CYCLE, UP TO 16,416 PRE-ROLLS PER DAY

The FlexPak 551 Max Pre-Roll Machine comes with:

Max Pre-Roll Machine	Two Plates of your Choice - 84mm .5/g, 98mm or 109mm King Size
Motor Controller	Setup Box
551 Cone Capacity Plate	Dutch Fold Crowning Tool

High Quality Materials

Each FlexPak machine is constructed and made in our US manufacturing facility. Our products are made from HDPE food grade plastic, stainless steel and anodized aircraft quality aluminum hardware, and precision machined plates with tapered cone holes.
